

WATER RESISTANT INK JET PRINTABLE SHEET

**ABSTRACT OF THE DISCLOSURE**

5           A water resistant coating composition for ink jet recordable substrates having a pH of less than 7, which includes:

          (a) an aqueous polyurethane dispersion; and

          (b) an aqueous solution of a nitrogen containing  
10   polymeric dye fixative compound. When applied to a suitable substrate, the coating composition allows for the recording of sharp, waterfast images. A coated ink recordable substrate is also disclosed, which includes a substrate having at least one side and at least one side of the substrate has a coating  
15   layer derived from the above described coating composition.
